

Supplementary Figure 1. Core and pan genome sizes of 100 diverse *K. pneumoniae* isolates. Gene rarefaction (left, core-genome) and accumulation (right, pan genome) curves are provided with the number of genes (y-axis) as a function of the number of genomes (x-axis). Core genome is defined as the number of genes found in 99% of the genomes. Boxplots indicate the variation in the number of genomes used for the calculation at each position.
